DISCUSSION QUESTIONS

1. The following are the names of the four main types of cells found in the human body. Write down the name of each cell and its function.

1.1. Epithelial cells: These cells form the lining of organs and tissues. They are responsible for protection and secretion.

1.2. Connective tissue cells: These cells provide structural support and connect different parts of the body. Examples include fibroblasts and macrophages.

1.3. Muscle cells: These cells are responsible for movement and contraction. They are found in the heart, skeletal muscles, and smooth muscles.
